MAGNETIC BEARING SENSOR AND
MAGNETO-IMPEDANCE SENSOR
ELEMENT

REQUEST FOR RECONSIDERATION

COMMISSIONER FOR PATENTS
ALEXANDRIA, VIRGINIA 22313

SIR:

Applicants herein request the reconsideration of the rejections of Claims 1-18, for the reasons set forth below.

Claims 1 and 16 were rejected under 35 U.S.C. § 112, second paragraph on two bases: that the claims are incomplete for omitting essential structural cooperative relationships, and that Claim 1 is vague as to the location of the insulator, the location of the coil, and the structure of the coil. This rejection is respectfully traversed.

As to the alleged incompleteness of Claim 1, it is noted that Claim 1 does indeed recite the structural cooperative relationships of the elements as set forth in italics below: “a first sensor, a second sensor, and a third sensor each constituted by a magneto-impedance sensor element comprising a magnetic sensitive member having a characteristic changed responsive to an external magnetic field, an insulator *formed to allow penetration of said magnetic sensitive member therethrough*, and an electromagnetic coil made up of foil-like
